TEAM

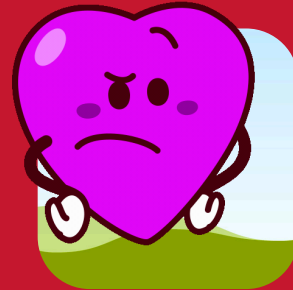

Bathabile Ngxishe – Product Manager

Oversaw project planning, feature coordination, and ensured the system met user and business requirements.

Luntu Mkhize – Assistant Manager

Assisted with project coordination, task management, and team communication throughout the development process.

Risana Kelly Siweya – Frontend Developer

Developed and implemented the user-facing components and interfaces of the system.

Welcome Khayeni Molefe – Backend Developer

Developed the backend logic, APIs, database integration, and server-side functionality of the application.

Aphiwe Sibusiso Mntambo – Tester

Responsible for testing the system, identifying bugs, and ensuring the application functions correctly.

Jabu Sithole – Researcher

Conducted research on maintenance management systems, user needs, and software engineering concepts relevant to the project.

Brilliant Temollo Maloma – Scrum Master

Coordinated team activities, managed sprint progress, and ensured smooth collaboration throughout the development process.

MOORE'S VISION STATEMENT FOR CRMRS

PROBLEM STATEMENT!

Students living in on-campus residences at IWS frequently experience maintenance issues such as plumbing faults, electrical failures, broken furniture, and poor room conditions. Current reporting methods rely heavily on verbal complaints and paperwork, resulting in delayed responses, poor communication, and reduced student satisfaction.

Campus Maintenance Management System

CRMRS provides a digital platform where students can report maintenance issues directly from a web or mobile application. The system automatically routes complaints to the appropriate maintenance department while allowing students to track issue progress in real time.

This improves:

- communication
- response efficiency
- transparency
- accountability

between all stakeholders involved.

PROPOSED SOLUTION

VISION

To improve campus living conditions through an efficient, transparent, and technology-driven maintenance management system.

MISSION

To provide students and maintenance teams with a centralized platform for reporting, tracking, and resolving maintenance issues quickly and effectively.

**UNIQUE
VALUE**

PROPOSITION

Unlike traditional verbal complaints and paper-based reporting systems, CRMRS offers:

- Real-time maintenance tracking
- Automated issue routing
- Instant notifications and updates
- Maintenance dashboards and analytics
- Centralized communication between students and maintenance departments

The platform improves operational efficiency while enhancing the overall student residence experience.

TARGET USERS

Secondary Users

- Maintenance staff
- Residence management administrators
- Campus housing departments

Primary Users

- Students living in campus residences

SUCCESS METRICS

- Reduction in maintenance response time
- Increased number of resolved complaints
- Improved student satisfaction
- Number of active users on the platform
- Faster communication between students and maintenance teams

MOORE'S VISION STATEMENT FOR CRMRS

**For:**

Students living in university residences and campus maintenance departments.

Who:

Struggle with inefficient maintenance reporting, delayed issue resolution, and poor communication between students and maintenance teams.

The:

Campus Residence Maintenance Reporting System (CRMRS)

Is a:

Centralized digital maintenance reporting and management platform.

That:

Allows students to report residence maintenance issues quickly and enables maintenance teams to manage, track, and resolve complaints efficiently through real-time updates and automated routing.

Unlike:

Traditional verbal complaints, paper-based reporting systems, and unstructured communication channels that cause delays and poor accountability.

Our Product:

Provides a secure, efficient, and transparent platform with complaint tracking, automated department assignment, real-time notifications, dashboards, and analytics to improve maintenance management and student living conditions.
